CORPORATE OVERVIEW

Applied Fiber Concepts, Inc. (AFCI) is an OEM/Private Label manufacturer of bullet-resistant armor systems and other tactical products for law enforcement, military, and private security personnel. While AFCI is still relatively young as a corporation, its Founder and President, Alex F. Cejas, has been designing, manufacturing, and selling body armor for more than 25 years. AFCI currently designs the hard and soft armor systems, engineers the ballistic protection panels to various threat levels dictated by the National Institute of Justice, the US Military, and international specifications, and AFCI markets and sells its products through supply agreements signed with manufacturers and distributors of tactical gear who choose to outsource their armor systems. The company strives to build its partnerships with a manufacturer and distribution network by developing OEM quality awareness and superior ballistic performance at competitive prices. AFCI offers its solutions as alternatives to existing bullet-resistant product lines, and differentiates itself by emphasizing OEM/Private Label benefits, promoting high performance and quality, and facilitating marketable armor solutions that help customer brand awareness.

COMPANY MISSION & VALUES

The Company's mission is to engineer, to design, and to manufacture a distinct variety of high-quality, high-performance protective products for the law enforcement, military, and private security communities. AFCI intends to "Apply Technology to Protecting Heroes".

We aspire to become the premier global OEM/Private Label manufacturer of choice for those tactical products companies that outsource all of their soft AND hard armor needs. Customer satisfaction is our hallmark. Protecting heroes is our duty and passion. Our core values include:

- Exemplary quality and service
- Innovative armor solutions
- Competitive prices
- Unparalleled reliability

We will be the "One-Stop Shop" for OEM body armor – All In. These are the values we bring to our customers — guaranteed.

SERVICES

ENGINEERING / DESIGN / MFG

Applied Fiber Concepts, Inc. boasts more than 50 combined years of experience in the design and development of soft and hard body armor systems and other specialty items. As such, the AFCI team has the knowledge, experience and expertise to facilitate virtually any armor related project.

- Armor Development and Testing
- Rapid Development and Costing
- Complex/ High Volume Manufacturing
- Project and Program Management
